Whenever there is a good idea for our App, just write it down on this list so that we don't have to think on the fly during our meetings:

1. **Rate my landlord** - rate my professor but for landlords. Start with cmu off campus area.
2. **WhosDown (Name is arbitrary):** An app that makes public Sports event scheduling much easier:

(Calendly for Sports)

- Basically a map-style posting of public sporting events(start as sports: soccer, jogging, flag football, basketball, baseball, etc.), where people in the vicinity can simply sign up
- You can either post events public or private
    - Public: Good for organizing bigger games, Meet new people, Joining a sports session in a new area, joining a sport you are not familiar with
    - Private: Creates a separate platform for keeping information about the friend circle's sports meetup. Send an invitation through the app; friends get notified (no longer are invite chats lost in memes)
- Simply, users clicking join gives participants info to the group or the organizer
- Rating system to keep liability of the people joining an event
- Sports Tutoring can also be scheduled: Find Coaches/ Find Students

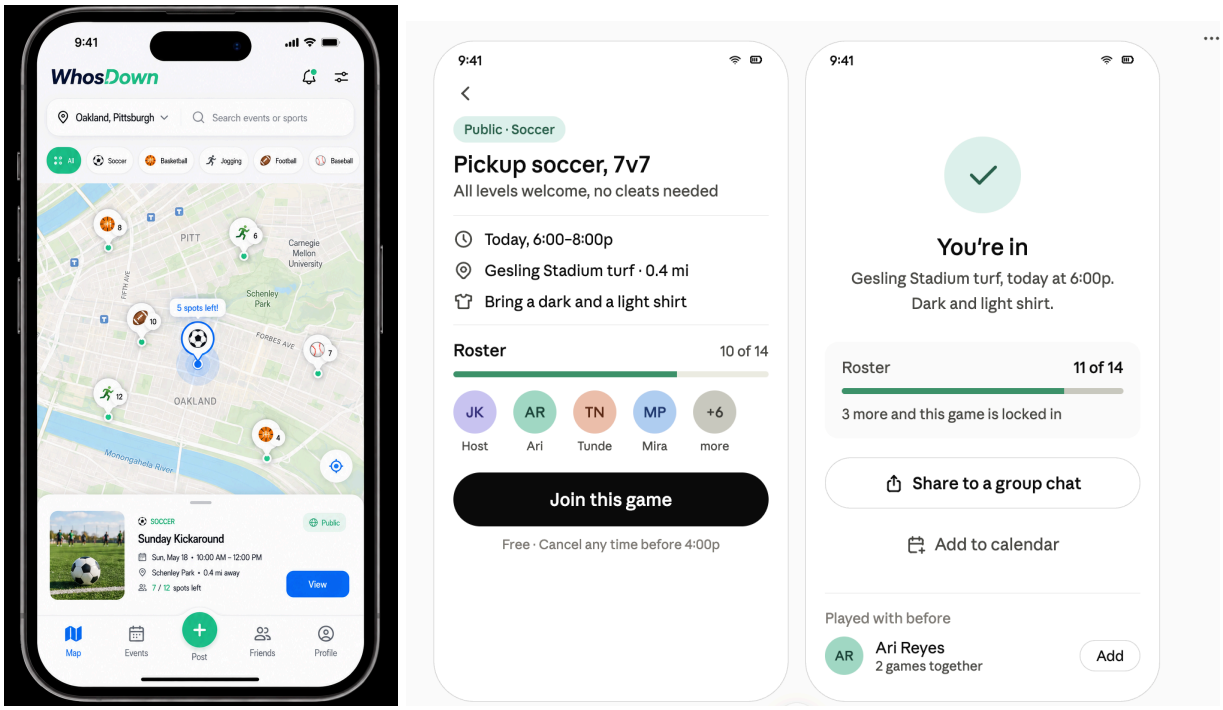

Problem:

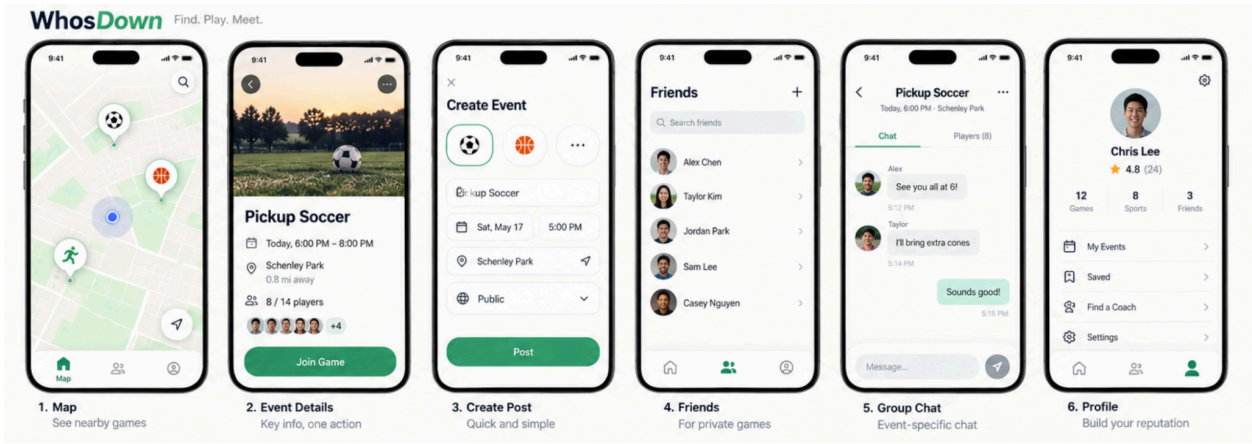

- I have retired from the soccer team. Now, it is so hard to find ppl to play with or organize a pickup soccer. Like, actually so hard.
- There are like 20+ different group chats for pickup soccer just around the cmu + pitt area. How do we manage that many? How do I even get invited to one?
- Oftentimes, the gc for pickup is the friends gc and chats for organizing a session get lost in the memes within 10 minutes.
- There is so much effort in being an organizer: check gc responds for who's coming, what to bring, where to be at what time, etc.
- Difficult to organize a decent amount of people for a fun game
- Not a unique problem to soccer pickups, but for all sporting events played for fun/after work + doesn't have to be sports: dance, music, etc. (essentially could expand to all sorts of public meetings)
- People are bored after work and want to play sports.
    - Why do people go to LA Fitness to play basketball? You know you can find people there who are playing → Applying this principle
- And honestly, don't people do all sorts of things to meet people..?

Key Components:

1. Simple Map-based UI that makes it easy to see what events are going on around you
2. A user recommender algorithm that suggests ongoing events that the user would like
3. You can add friends through the app for private events or connecting with somebody you played with that day to build a web of acquainted users.
4. Easy sign up + Attendees just have to click on the link from gc and press one button 'Join'

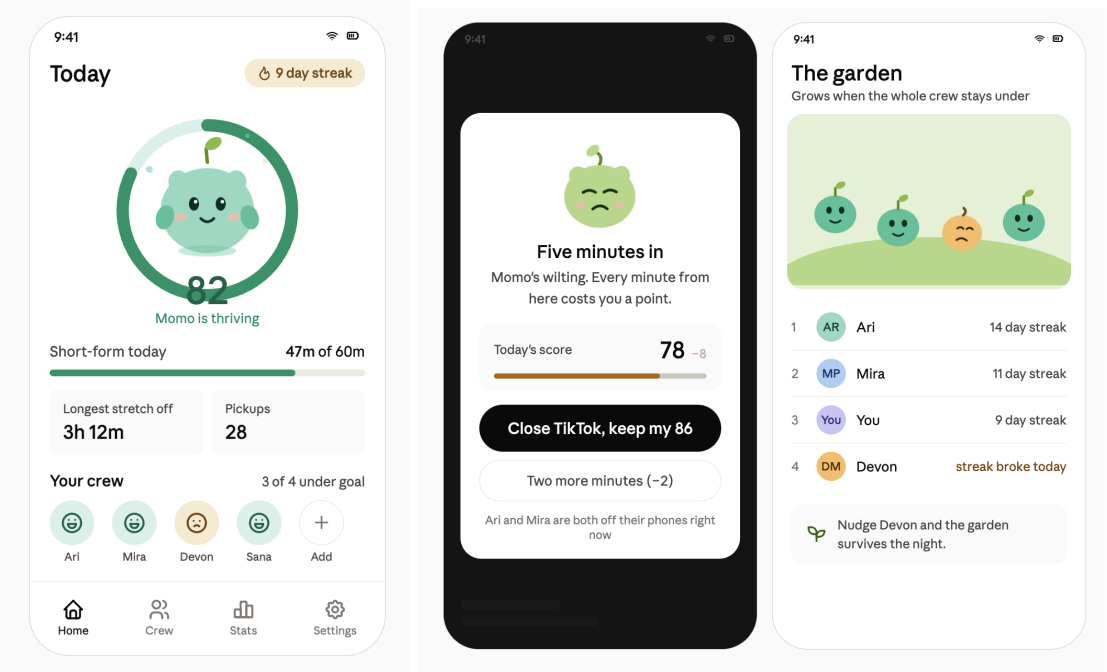

5. Rating system that makes public events fun + reduces bad users: voting for who was the best player, who you would enjoy playing with again, were there ppl with bad manners

3. **Again?** - *A game that slows you down* - Everybody is addicted to shorts, reels, or tic tok these days. We all want to decrease screen time on it, but is it actually working? Make a cute animated visuals game that tracks how much you were using the short-form platform that day → this is related to your score on the app. Being on it with your friends might give you the chance to watch less

- Even integrate features like ‘your score’s about to go down if you keep watching’ after 5 minutes of watching or when Instagram, YT, TicTok, whatever app is started

4. **CatchMeUp** - App for older people / Unc's to keep up with the current trends
5. **SpecialOne** - App that lets makes communication with your partner much easier
