In this phase, we are focused on modeling the user experience for a mobile application and making sure that all user interactions are covered. You will be required to create a set of low-fidelity and high-fidelity wireframes using the software application of your choice (paper wireframes are also accepted here) that cover all the possible interactions a user can have with the app.

In addition, you must test the low-fidelity wireframes out with at least 4 users that would fall in your target user audience (identified in the prior sprint); for reasons discussed in class, these tests must be conducted with the low-fidelity wireframes only. As you go through the functionality with the users, seek to determine which features are "must have" versus "want to have" versus "like to have" from the user's perspective.

After these tests, you must report on your findings, identifying needed changes in the initial wireframes to make for a better user experience overall. The main report should summarize the findings of the four (or more) users as well as provide an analysis of lessons learned. The details of the individual user test responses should be placed in an appendix to the report and not in the report itself.

Finally, the changes identified in the low-fidelity wireframe testing need to be reflected in a set of high-fidelity wireframes that will guide your app development going forward. Bonus points will be awarded if you are able to retest other target users with the revised high-fidelity wireframes and can confirm that the interactions are what the user expects and desires.

Deliverables

This sprint's deliverables include both a set of low- and high-fidelity wireframes and a written report of the user interaction study. The submission of these deliverables is due electronically to Prof. H, your supervising TA, and alumni mentor by the deadline set on Canvas; post a copy of the deliverables to Canvas as well. It will constitute 4 percent of your final course grade.

During this sprint you will have two required 15-minute check-ins with your supervising TA (on 9/22 and 9/29) and you have one required check-in with your alumni mentor (to be scheduled with him/her for some date between 9/25 and 9/28). As a reminder, failure to complete these check-ins in a timely manner will result in a grade penalty.

Resources

- Apple Design Resources

Links to an external site.

- A set of resources you can use to build out wireframes using either Keynote, Sketch, or Photoshop, as well as some other design tidbits that could be useful.

- Apple Human Interface Guideline

Links to an external site.

- A nice overview of the UI/UX guidelines Apple encourages for iOS apps.

Rubric

Sprint 2 Rubric

Criteria	Ratings	Pts
This criterion is linked to a Learning Outcome Low-fidelity wireframes complete	**25 ptsFull Marks**All relevant screens have been mocked up and all user interactions have been captured **15 ptsMostly Complete**Wireframes are mostly complete, but a few interactions are missing. Max is one major user interaction missing or three minor interactions **8 ptsSubstantially Incomplete**Wireframes are present but far from complete, with many user interactions missing **0 ptsNo Marks**The team did not turn in any low-fidelity wireframes or what was turned is was effectively worthless.	25 pts

This criterion is linked to a Learning Outcome High-fidelity wireframes complete	**20 ptsFull Marks**All relevant screens have been mocked up and all user interactions have been captured. Data used is realistic (although fictional) and appropriate. **12 ptsMostly Complete**Wireframes are mostly complete, but a few interactions are missing. Max is one major user interaction missing or three minor interactions **6 ptsSubstantially Incomplete**Wireframes are present but far from complete, with many user interactions missing **0 ptsNo Marks**The team did not turn in any low-fidelity wireframes or what was turned is was effectively worthless.	20 pts
This criterion is linked to a Learning Outcome High-fidelity wireframes reflect learning	**10 ptsFull Marks**The high-fidelity wireframes show evidence that have been modified appropriately to reflect lessons learned from the initial user feedback. **0 ptsNo Marks**The high-fidelity wireframes show little to no evidence that have been modified appropriately to reflect lessons learned from the initial user feedback.	10 pts

This criterion is linked to a Learning Outcome Initial user feedback	**20 ptsFull Marks**At least four users from the target audience (preferably more) provided feedback on the low-fidelity wireframes. **12 ptsPartial user tests**Only two or three users from the target audience provided feedback on the low-fidelity wireframes **0 ptsNo Marks**Only one user (or none) from the target audience provided feedback on the low-fidelity wireframes. (Will by default also fail the learning outcomes below as well.)	20 pts
This criterion is linked to a Learning Outcome Lessons learned report	**20 ptsMultiple lessons learned**Team reflected on the user feedback and were able to identify numerous gaps (large and small) in user interactions or areas in need of modification. Strategies to remediate are discussed. **12 ptsSeveral lessons learned**Team reflected on the user feedback and were able to identify a couple of gaps (2-3; large or small) in user interactions or areas in need of modification. Strategies to remediate are discussed. **8 ptsAt least one lesson learned**Team reflected on the user feedback and were able to identify a gap (large or small) in user interactions or areas in need of modification. Strategies to remediate are discussed. **0 ptsNo effective lessons learned**Team either did not reflect on the user feedback or were unable to identify any gaps (large or small) in user interactions or areas in need of modification.	20 pts
This criterion is linked to a Learni	**5 ptsFull Marks**Team provided a bullet-pointed lists for both (1) what advice was given to the team by the mentor, and (2) action items the team took away from the meeting. **3 ptsMissing one list**Team is missing one of the two required lists. **0 ptsNo Marks**Team did not report on the mentor meeting or what was communicated was very difficult to understand.	5 pts
